## Problem Statement

---

### Previous Date

time limit per test: 1 second

memory limit per test: 256 megabytes

input: standard input

output: standard output

You are given a day of the year in the format of DD-MM-YYYY. This day may or may not be valid. Your task is to return the day before the day which you are given. If the given day is invalid then print a message "Invalid" or print the previous date in the same format as DD-MM-YYYY.

#### Input

Input contains only a single string denoting the day, which may or may not be valid.

#### Output

Output must contain only a single line. If the give date is not valid. Print **"Invalid Date"** else print the previous date in the DD-MM-YYYY format.

#### Examples

input
01-01-2015
output
31-12-2014

input
29-0Wz1805
output
Invalid Date

#### Note

String may contain more than one words and you also need to handle this.
